

Application de gestion de livres avec React + Redux Toolkit + Jest.

Fonctionnalités :

- Afficher une liste de livres (cards)
- Récupérer les livres depuis une API
- Rechercher et filtrer
- Ajouter / éditer / supprimer un livre
- Ajouter un like
- Tests unitaires (reducers, thunks, composants)

booksSlice.js

```
import { createSlice, createAsyncThunk } from '@reduxjs/toolkit'  
  
export const fetchBooks = createAsyncThunk(  
  'books/fetchBooks',  
  async () => {  
    const res = await fetch('https://example.com/books')  
    return res.json()  
  }  
)  
  
const booksSlice = createSlice({  
  name: 'books',  
  initialState: {  
    items: [],  
    status: 'idle',  
    search: ''  
  },  
  reducers: {  
    addBook: (state, action) => {
```

```

.....},
editBook: (state, action) => {
.....
},
deleteBook: (state, action) => {
.....
},
addLike: (state, action) => {
.....
},
setSearch: (state, action) => {
.....
}
},
extraReducers: builder => {
builder
.addCase(fetchBooks.fulfilled, (state, action) => {
.....
}))
}
})

export const { addBook, editBook, deleteBook, addLike, setSearch } = booksSlice.actions
export default booksSlice.reducer

```
